Biomedicine and Molecular Biosciences (BMBS)

BMBS covers all areas of medicine as practiced in Europe and basic, preclinical and clinical medical research developed to materialise the “bench to bedside” concept.

Research in biomedicine emphasises acquisition of knowledge of normal functions of the human body and alterations of them in the case of diseases. These functions may be conducted at the molecular and the whole body level, not excluding its integration in the environment (food, water supply, pollutants, forests, urban environment, etc.).
