## Events

### COST Training School: Cascade Chemoenzymatic Processes - New Synergies between Chemistry and Biochemistry

Location	University of Siena, Italy
Date	29 April - 03 May 2009
Calendar file	.vcs               .ics

**COST Training Schools disseminated the outcomes of activities which were part of COST Actions or provided intensive training on a new emerging subject. They were open to early-stage and senior researchers alike. As part of the Outreach Strategy, fifteen training schools took place between March and May 2009, on a variety of topics.**

Biocatalysis has become an increasingly important technology in the chemical industry.

This training school contributed to disseminating a profound multidisciplinary knowledge of this topic based on best practice, state-of-the-art methodology within the scope of cascade biocatalysis.

The course also identified existing problems for integrating chemical and biological synthesis methodology and opportunities for future developments.

It trained ESRs from various chemistry backgrounds and life science in their scientific competence for research and innovation in this research field. ESRs were introduced to a global overview of different research fields and state-of-the-art methodology within the Action. It provided students with contacts, an enhanced level of interdisciplinary communication and trans-national team-working competence.

## Registration

Upon invitation only

COST is supported by the EU RTD Framework Programme

ESF provides the COST Office through a European Commission contract

The Council of the European Union provides the COST Secretariat
